

For Windows XP, once you've updated it to it's End Of life, you need to install the following:
Start by going to <http://sdfox7.com/xp/sp3/EOL/> to download & install SeaMonkey. Then, you can install the following below:

Alky for Applications (so that you can use Patch My PC Updater & this is the first thing that you need. Use it to install Mozilla Firefox ESR 52.7.2.) After the updater uses Firefox 60 ESR instead of 52 ESR, you can switch to Maxthon 5.

Windows XP Update Extender 1.0.0.0

DirectX 9.0c (June 2010) End User Runtime

Microsoft .NET Framework 4 Extended

Setup2go

7-Zip

All of the hot fixes for Windows XP Service Pack 3 (This includes Windows Installer 4.5).

Microsoft Office 2010

All of your games (might require you to upgrade to DirectX 10, 11 & even 12)

You can install the One-Core-API Binaries once they are released or if Windows Embedded POSReady 2009 reaches its end of life.

GIMP

If Windows Update doesn't work, you can then get Portable Update.

Uninstall Acrobat Reader 5 because modern web browsers can open PDF files.

Adobe Air

Adobe Flash Player (All 3 Versions)

KC Software SUMo

You can also get an update so that you're not affected by the WannaCry ransomware.
